# Definition

## Complex is better than complicated

"Complex is better than complicated" means that it is preferable to have solutions or designs that are sophisticated yet easy to understand rather than being confusing and hard to comprehend.

# Code: Confusing

```python
def suma(a, b):
    return a + b

# Uso del código
resultado = suma(5, 3)
print("El resultado de la suma es:", resultado)
```

# Code: Clear

```
resultado = 5 + 3
print("El resultado de la suma es:", resultado)
```
